## About

This plugin adds two menus and a shortcode for allowing pages to be translated on your web site. The standard menu displays country flags and will translate the current page. The vertical menu displays a box enabling the user to enter text and have it displayed. The shortcode can be added to your theme.php file to display the flags and translate the current page.

It will translate from English to Spanish, German, French, Italian, Korean, Chinese, Arabic, Japanese, Russian, and Portuguese. It will also translate from some of those back to English.

It displays a banner from google above your web page when it has been translated. Doesn't appear to keep you logged in when you translate, not worked out how to get round that yet.

## Installation

Copy the folder to your plugins' directory and install from the plugin manager. There is nothing to configure so you can just activate the menus in the menu manager. The shortcode {GOOGLETRANS} can be placed in your theme.php file where required.

## Version 1.2

A number of XHTML fixes by 2Dopey

## Version 1.1

Initial Release

Support only at [www.keal.me.uk](http://www.keal.me.uk)

## **Just for Info**

I use PDFCreator from <http://sourceforge.net/projects/pdfcreator/> as the PDF creator, a great free and comprehensive utility.

For editing I use PHP Edit from <http://www.waterproof.fr/>
